

ADVISOR Enterprise

Module #5: Project and Resource Management

With multiple competing priorities, maintaining projects on time and within budget is one of the greatest challenges for any project manager. To minimize delays and cost overruns, a solid project plan is vital for keeping the project on track by identifying time, money and resources needed for each step; what needs to be done and when; critical paths/milestones; relationships among various tasks (i.e., how delays in one task impact others); as well as who will be doing what and when. Since the best-laid plans can go awry, a tracking system is also needed to monitor progress, anticipate problems and allow for corrective measures.

ADVISOR Projects and Resources Management

How training should be implemented

- Project Management
- Resource Management

ADVISOR Added Value

Simplifies the Analysis

- ✓ Provide step by step methodology for inexperienced users.
- ✓ Facilitate collaboration. Notify team members instantly of new assignments and changes as well as request confirmation.

Speeds the Analysis

- ✓ Quickly forecast time and money needed to develop, deliver, maintain and support training programs.
- ✓ Promptly locate personnel and resources with desired skills and attributes; validate availability and assign to various tasks.
- ✓ Automatically compile and analyze data from team members, update projects status and communicate results to clients.

Improves Project and Resource Management

- ✓ Minimize delays and cost overruns by generating accurate time and cost estimates, producing solid project plans and tracking progress in real-time.
- ✓ Anticipate problems and pinpoint corrective measures by continually assessing progress relative to project plan.
- ✓ Improve resource allocation by tracking the overall utilization rates of personnel and resources.
- ✓ Forecast future personnel and resource needs based on upcoming projects.
- ✓ Provide invaluable searchable repository of training personnel and resources.

Proven Track Record

Supports US (MIL-HDBK-29612), Canadian (CFITES) and UK (DTSM) military standards, is highly configurable/customizable and has been successfully implemented in several military projects including:

- | | |
|--|--|
| <input type="checkbox"/> Joint Strike Fighter (JSF) | <input type="checkbox"/> Canadian Tactical Airlift Project (C130J) |
| <input type="checkbox"/> US Army Training Enterprise Integration | <input type="checkbox"/> Canadian Maritime Helicopter Project (MHP) |
| <input type="checkbox"/> US Army Blackhawk (BH) | <input type="checkbox"/> Canadian Officer Development Program |
| <input type="checkbox"/> US Aircrew Training & Rehearsal Support | <input type="checkbox"/> Operational Training Systems Provider (OTSP) |
| <input type="checkbox"/> UK Military Flying Training System (MFTS) | <input type="checkbox"/> Aircraft Technical Training Analysis (ATTA) |
| <input type="checkbox"/> UK Defence Training Review (DTR) | <input type="checkbox"/> Republic of Singapore Basic Wing Course (BWC) |
