

NEWS RELEASE

For Immediate Release

Bluedrop and BNH Expert Software will offer a combined BNH Training Management System and Bluedrop Learninglogics suite.

Halifax, NS, Canada, May 29th, 2024 - Bluedrop Training & Simulation Inc. (“Bluedrop”) and BNH Expert Software (“BNH”) have agreed to provide an end-to-end training solution by seamlessly integrating Bluedrop’s Learninglogics LCMS and BNH ADVISOR Enterprise Training Management System.

BNH Training Management System simplifies Training Needs Analysis (TNA), speeds Training Media Analysis (TMA), generates Training Plans, manages training requirements, forecasts training personnel/resource requirements and drives training effectiveness efficiency. Bluedrop Learninglogics is the software of choice for courseware development. It includes Training Document Management (TDM) and Learning Content Management System (LCMS) and Learning Management System (LMS).

Moreover, the integrated systems will continually identify venues for improving performance by seamlessly transferring data from ADVISOR Training Analysis and Training Design modules to Bluedrop Learninglogics LCMS for development and LMS for evaluation. To close the loop, relevant data will then be made available to ADVISOR Performance Analysis module. Collected data will be compiled and analyzed to identify the causes of a problem and potential solutions.

Bluedrop and BNH will continue to offer both products individually and now as a package for organizations seeking a comprehensive, integrated training system.

“On behalf of Bluedrop I am pleased to announce that with the integration of the two products, training organizations can now seamlessly execute the whole training process end-to-end, using the best software tools available. This will ensure improved efficiency, continuous configuration management and traceability for our customers.”

- Jean-Claude Siew, Vice President of Technology & Simulation, **Bluedrop Training & Simulation**

“Digitizing the training environment will lead to better training and greater efficiencies. In addition to speeding training analysis, design, development, delivery, and evaluation, it minimizes human errors. Moreover, by aligning training courses/activities with operational needs, gaps, duplications, and training with minimal value can be easily detected and flagged. As a result of this initiative, our clients will have access to a comprehensive, reliable, proven, and fully integrated solution that can be tailored to their own specific needs.

- J. Bahlis, Ph.D., P. Eng., President, **BNH Expert Software Inc.**

ABOUT BNH

Since 1987, hundreds of organizations have relied on BNH products and services to simplify and speed training analysis; manage training requirements; forecast and optimize training resources; improve resource allocation; produce audit trails to support recommendations; and generate reports that meet the requirements of various standards. We continue to expand our services while remaining responsive to our clients’ needs.
