BNH Training Management System ADVISOR Enterprise Selected for Managing the Training Requirements of the Future Aircrew Training System (FAcT)

Montreal, QC – June 26, 2024. BNH Expert Software Inc. proudly announced today their contribution to the Future Aircrew Training Program (FAcT). BNH flagship product, ADVISOR Enterprise, has been selected to manage the training requirements of pilots and aircrew for the Royal Canadian Air Force (RCAF).

The FAcT program is a transformative 25-year initiative valued at \$11.2 billion. It represents a pivotal advancement in preparing Canadian Military Pilots, Air Combat Systems Officers, and Airborne Electronic Sensor Operators for future challenges. In partnership with industry, RCAF will design, develop, and implement a comprehensive training and support system. This system will encompass live flying, simulation, ground school training, and a range of in-service support functions. The FAcT Program continues Canada’s esteemed legacy of military aircrew training excellence.

BNH Training Management System ADVISOR Enterprise, can quickly (a) forecast costs, personnel and resources needed to produce the desired number of graduates; (b) assess the impact of increases or decreases in annual throughput on costs, personnel and resource requirements, (c) assess the impact of changes to instructor qualifications on costs, instructors’ availability, and schedule; (d) identify potential bottlenecks; and (e) assess the impact of using new training technologies on costs, personnel/resource requirements and time to competency. Moreover, ADVISOR Enterprise generates digital threads that links Tasks, Sub Tasks, Knowledge, Skills and Attitudes to Performance Objectives, Enabling Objectives, Courses, Lessons and Teaching Points. This in-turn leads to the generation of top-down audit reports to reveal how each requirement is being addressed.

“The Future Aircrew Training program is performance based” said President of BNH Expert Software Inc. J. (Jay) Bahlis, Ph.D., P. Eng. Compensation is based on the number graduates that successfully complete the program – i.e., individuals that can perform Tasks to the desired standards under the prescribed conditions. Developing and maintaining effective and efficient training solutions over the 25-year life of the program is critical. BNH Training Management System ADVISOR Enterprise will continually realign training to operational requirements and assess trainees’ performance to uncover areas of improvement.

About BNH

Since 1987, hundreds of military, corporate and government agencies worldwide have relied on BNH to improve training effectiveness and efficiency. BNH products and services streamline Training Needs Analysis (TNA); simplify the management of training requirements; and maintain training effectiveness

and efficiency over time as missions, systems, jobs, policies, technologies, throughput, etc., change. This is achieved through a digital model that aligns training courses/activities with operational needs to identify gaps, duplications, and training with minimal value; uncovers cost drivers; forecasts/compares the costs of viable delivery options; improves resource allocation; and identifies/mitigates bottlenecks.
